

# Traffic Impact Study

## Proposed Taco Bell

Oak Park, Illinois

Prepared For:

Ampler Development

**KLOA**  
Kenig, Lindgren, O'Hara, Aboona, Inc.

February 20, 2020

# 1. Introduction

This report summarizes the methodologies, results, and findings of a traffic impact study conducted by Kenig, Lindgren, O'Hara, Aboona, Inc. (KLOA, Inc.) for a proposed Taco Bell restaurant to be located in Oak Park, Illinois. The site, which contains a vacant US Bank building, is located in the northwest quadrant of the intersection of Roosevelt Road with Austin Boulevard. As proposed, the site will be redeveloped with an approximately 2,145 square-foot Taco Bell restaurant with a drive-through window and 22 parking spaces. Access to the proposed restaurant will be provided via a full movement access drive off Roosevelt Road and via a full movement access drive off Austin Boulevard, both of which will replace existing access drives serving the site.

The purpose of this study was to examine background traffic conditions, assess the impact that the proposed restaurant will have on traffic conditions in the area, and determine if any roadway or access improvements are necessary to accommodate the traffic generated by the proposed restaurant.

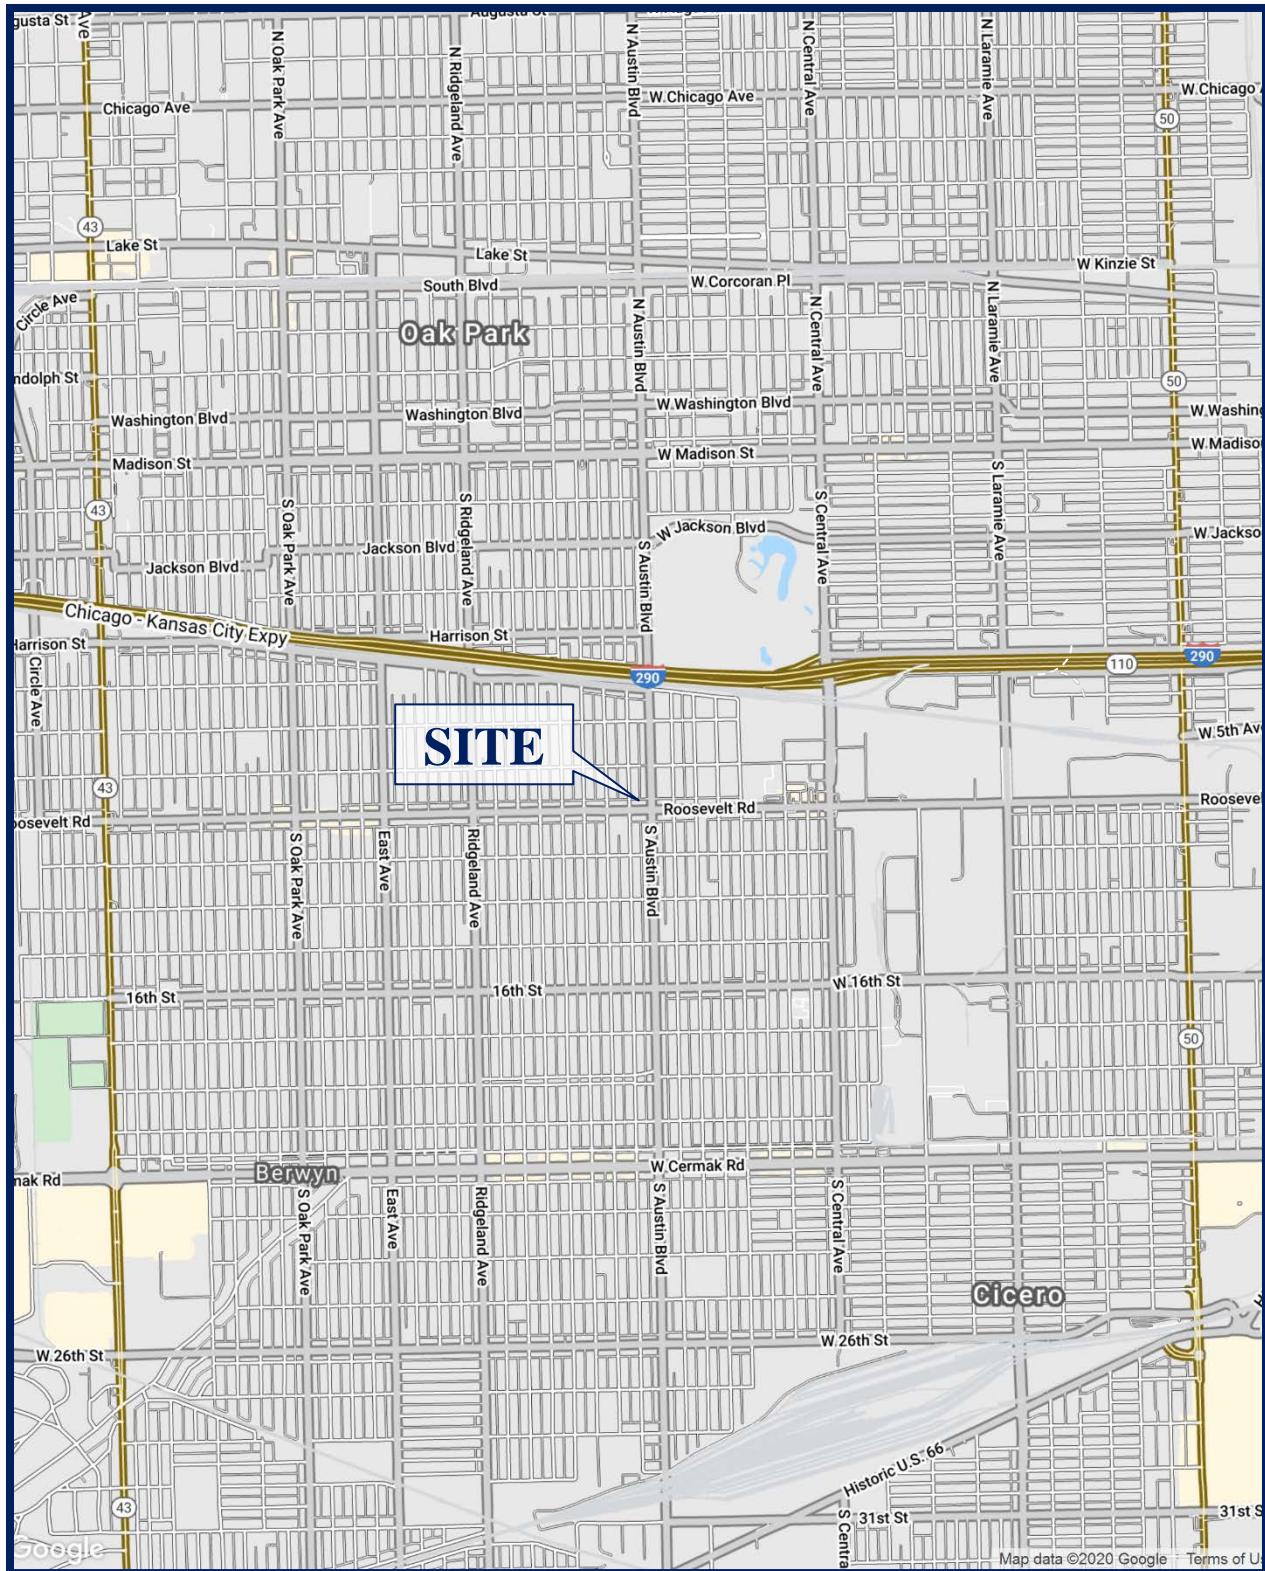

**Figure 1** shows the location of the site in relation to the area roadway system. **Figure 2** shows an aerial view of the site.

The sections of this report present the following:

- Existing roadway conditions
- A description of the proposed restaurant
- Directional distribution of the restaurant traffic
- Vehicle trip generation for the restaurant station
- Future traffic conditions including access to the restaurant
- Traffic analyses for the weekday morning, weekday midday, and weekday evening peak hours
- Recommendations with respect to adequacy of the site access and adjacent roadway system

Traffic capacity analyses were conducted for the weekday morning, weekday midday, and weekday evening peak hours for the following conditions:

1. Existing Conditions – Analyzes the capacity of the existing roadway system using existing peak hour traffic volumes in the surrounding area.
2. No-Build Conditions – Analyzes the capacity of the existing roadway system using existing peak hour traffic volumes increased by an ambient area growth factor not attributable to any particular development.
3. Projected Conditions – Analyzes the capacity of the future roadway system using the projected traffic volumes that include the existing traffic volumes, ambient area growth not attributable to any particular development, and the net increase in traffic estimated to be generated by the proposed development.

## 2. Existing Conditions

Existing transportation conditions in the vicinity of the site were documented based on field visits conducted by KLOA, Inc. in order to obtain a database for projecting future conditions. The following provides a description of the geographical location of the site, physical characteristics of the area roadway system including lane usage and traffic control devices, and existing peak hour traffic volumes.

### Site Location

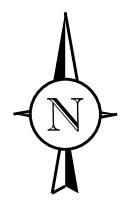

The site, which currently contains a vacant US Bank building, is bounded by an east-west alley to the north, Austin Boulevard to the east, Roosevelt Road to the south, and Humphrey Avenue to the west. Land uses in the vicinity of the site are primarily residential with multi-family and single-family homes located north and south of the site. Multiple commercial developments are located east and west of the site along Roosevelt Road.

### Existing Roadway System Characteristics

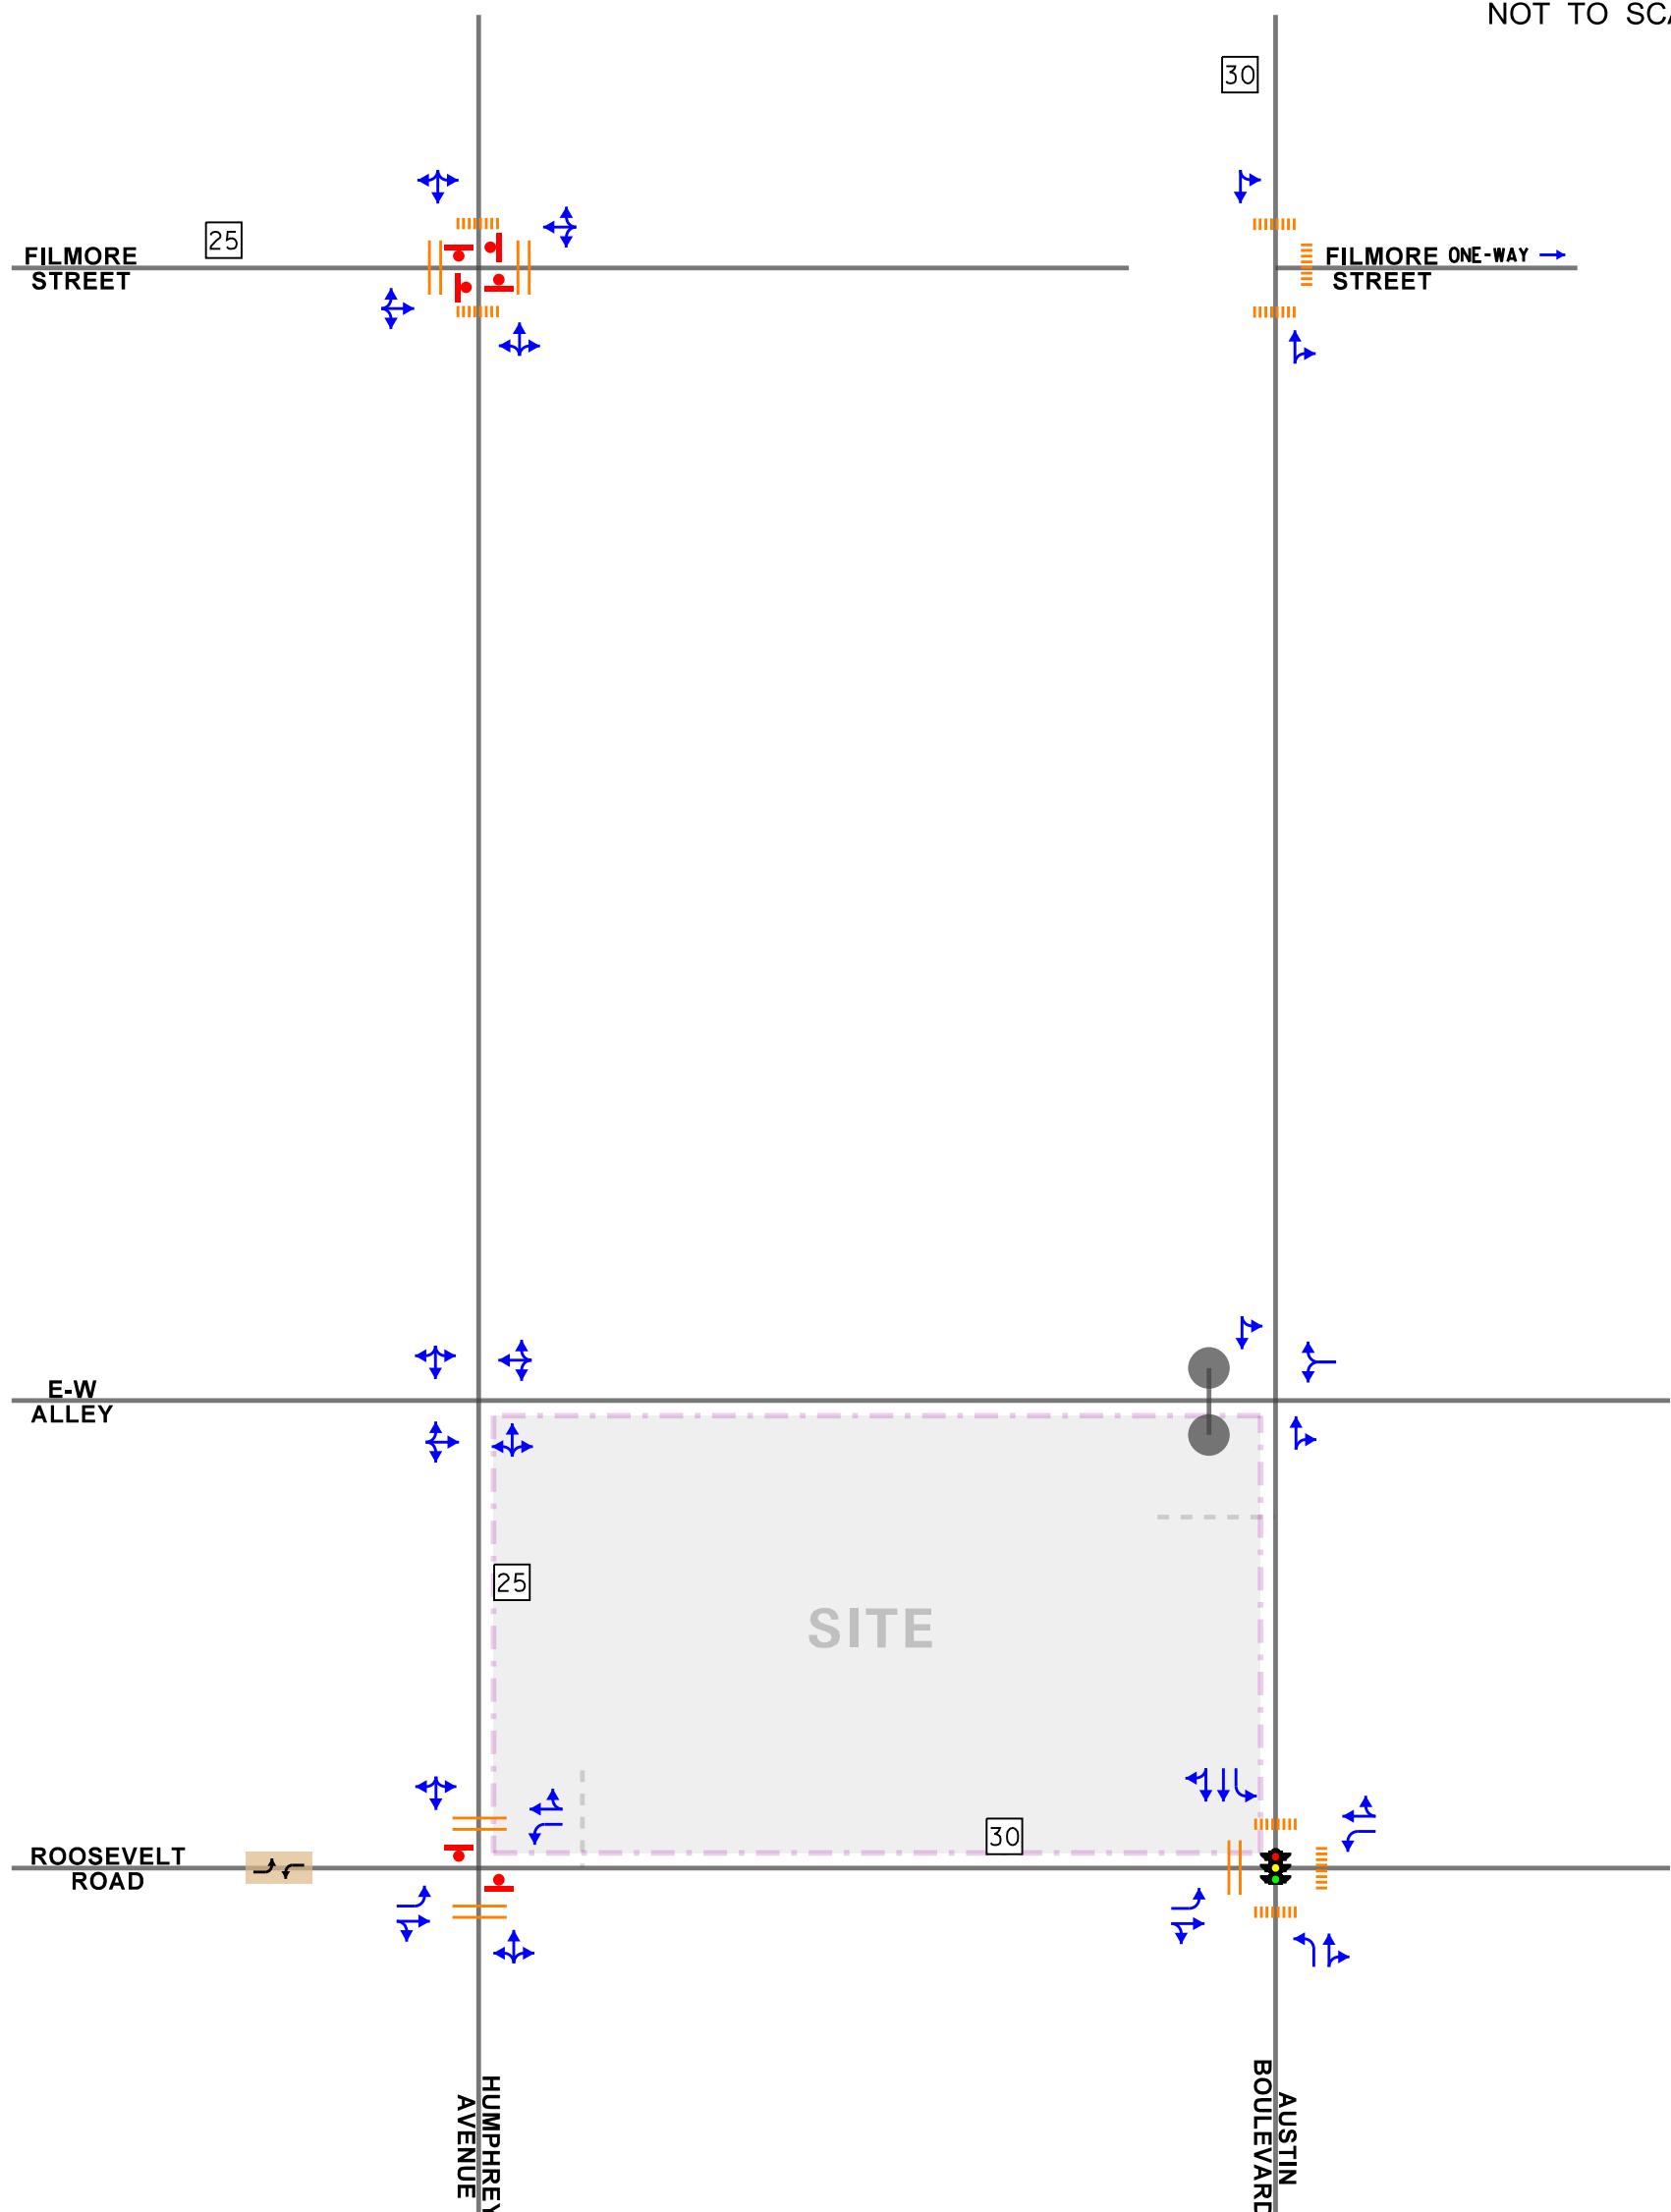

The characteristics of the existing roadways near the site are described below and illustrated in **Figure 3**.

*Roosevelt Road* is an east-west, principal arterial roadway that provides two through lanes in each direction generally divided by a two-way left-turn lane west of Humphrey Avenue/60<sup>th</sup> Court. At its signalized intersection with Austin Boulevard, Roosevelt Road provides an exclusive left-turn lane and a shared through/right-turn lane on both approaches. At its unsignalized intersection with Humphrey Avenue/60<sup>th</sup> Court, Roosevelt Road provides a two-way left-turn lane and a shared through/right-turn lane on the eastbound approach and an exclusive left-turn lane and a shared through/right-turn lane on the westbound approach. Roosevelt Road is under the jurisdiction of the Illinois Department of Transportation (IDOT), has a posted speed limit of 30 miles per hour, is not designated as a Strategic Regional Arterial (SRA) route, and carries an annual average daily traffic (AADT) volume of 17,700 vehicles east of Austin Boulevard and 19,000 vehicles west of Austin Boulevard (IDOT 2018). Parking is generally permitted on both sides of the road.

*Austin Boulevard* is a north-south, minor arterial roadway that provides one through lane in each direction widening to two southbound lanes at its intersection with Roosevelt Road. At its signalized intersection with Roosevelt Road, Austin Boulevard provides an exclusive left-turn lane and a shared through/right-turn lane on the northbound approach and an exclusive left-turn lane, a through lane, and a shared through-right-turn lane on the southbound approach. At its unsignalized intersection with the east-west alley, Austin Boulevard provides two southbound lanes and one northbound lane. Approximately 2,000 feet north of Roosevelt Road, Austin Boulevard has a signalized interchange with I-290 (Dwight D. Eisenhower Expressway) Austin Boulevard is under the jurisdiction of the Village of Oak Park, has a posted speed limit of 30 miles per hour, is not designated as an SRA route, and carries an AADT volume of 20,700 vehicles north of Roosevelt Road and 15,800 vehicles south of Roosevelt Road (IDOT 2018). Parking is generally permitted on both sides of the road.

## EXISTING ROADWAY CHARACTERISTICS

*Humphrey Avenue* is a north-south local roadway that extends north from Roosevelt Road where it is aligned opposite 60<sup>th</sup> Court. Humphrey Avenue provides one lane in each direction. At its all-way stop-sign controlled intersection with Filmore Street, Humphrey Avenue provides a shared through/left-turn/right-turn lane on both approaches. At its unsignalized intersection with Roosevelt Road, Humphrey Avenue provides a shared through/left-turn/right-turn lane on the southbound approach and is under stop sign control. At its unsignalized intersection with the east-west alley, Humphrey Avenue provides one lane in each direction. Humphrey Avenue is under the jurisdiction of the Village of Oak Park and has a posted speed limit of 25 miles per hour. Parking is generally permitted on both sides of the road.

60<sup>th</sup> *Court* is a north-south local roadway that extends south from Roosevelt Road where it is aligned opposite Humphrey Avenue. 60<sup>th</sup> Court provides one lane in each direction. At its unsignalized intersection with Roosevelt Road, Humphrey Avenue provides a shared through/left-turn/right-turn lane on the southbound approach and is under stop sign control. 60<sup>th</sup> Court is under the jurisdiction of the Town of Cicero and has a posted speed limit of 20 miles per hour. Parking is generally permitted on both sides of the road.

*Filmore Street* is an east-west local roadway that provides one lane in each direction. At its all-way stop-sign controlled intersection with Humphrey Avenue, Filmore Street provides a shared through/left-turn/right-turn lane on both approaches. East of Humphrey Avenue and just west of Austin Boulevard, Filmore Street terminates. Filmore Street continues from the east side of Austin Boulevard as a one-way eastbound only roadway. Filmore Street is under the jurisdiction of the Village of Oak Park and has a posted speed limit of 25 miles per hour. Parking is generally permitted on both sides of the road.

*The East-West Alley* extends along the site's north border. At its unsignalized intersection with Austin Boulevard, the west leg is gated and signed for no entry. The east leg provides one outbound lane. At its unsignalized intersection with Humphrey Avenue, the alley provides one lane in each direction.

## Existing Traffic Volumes

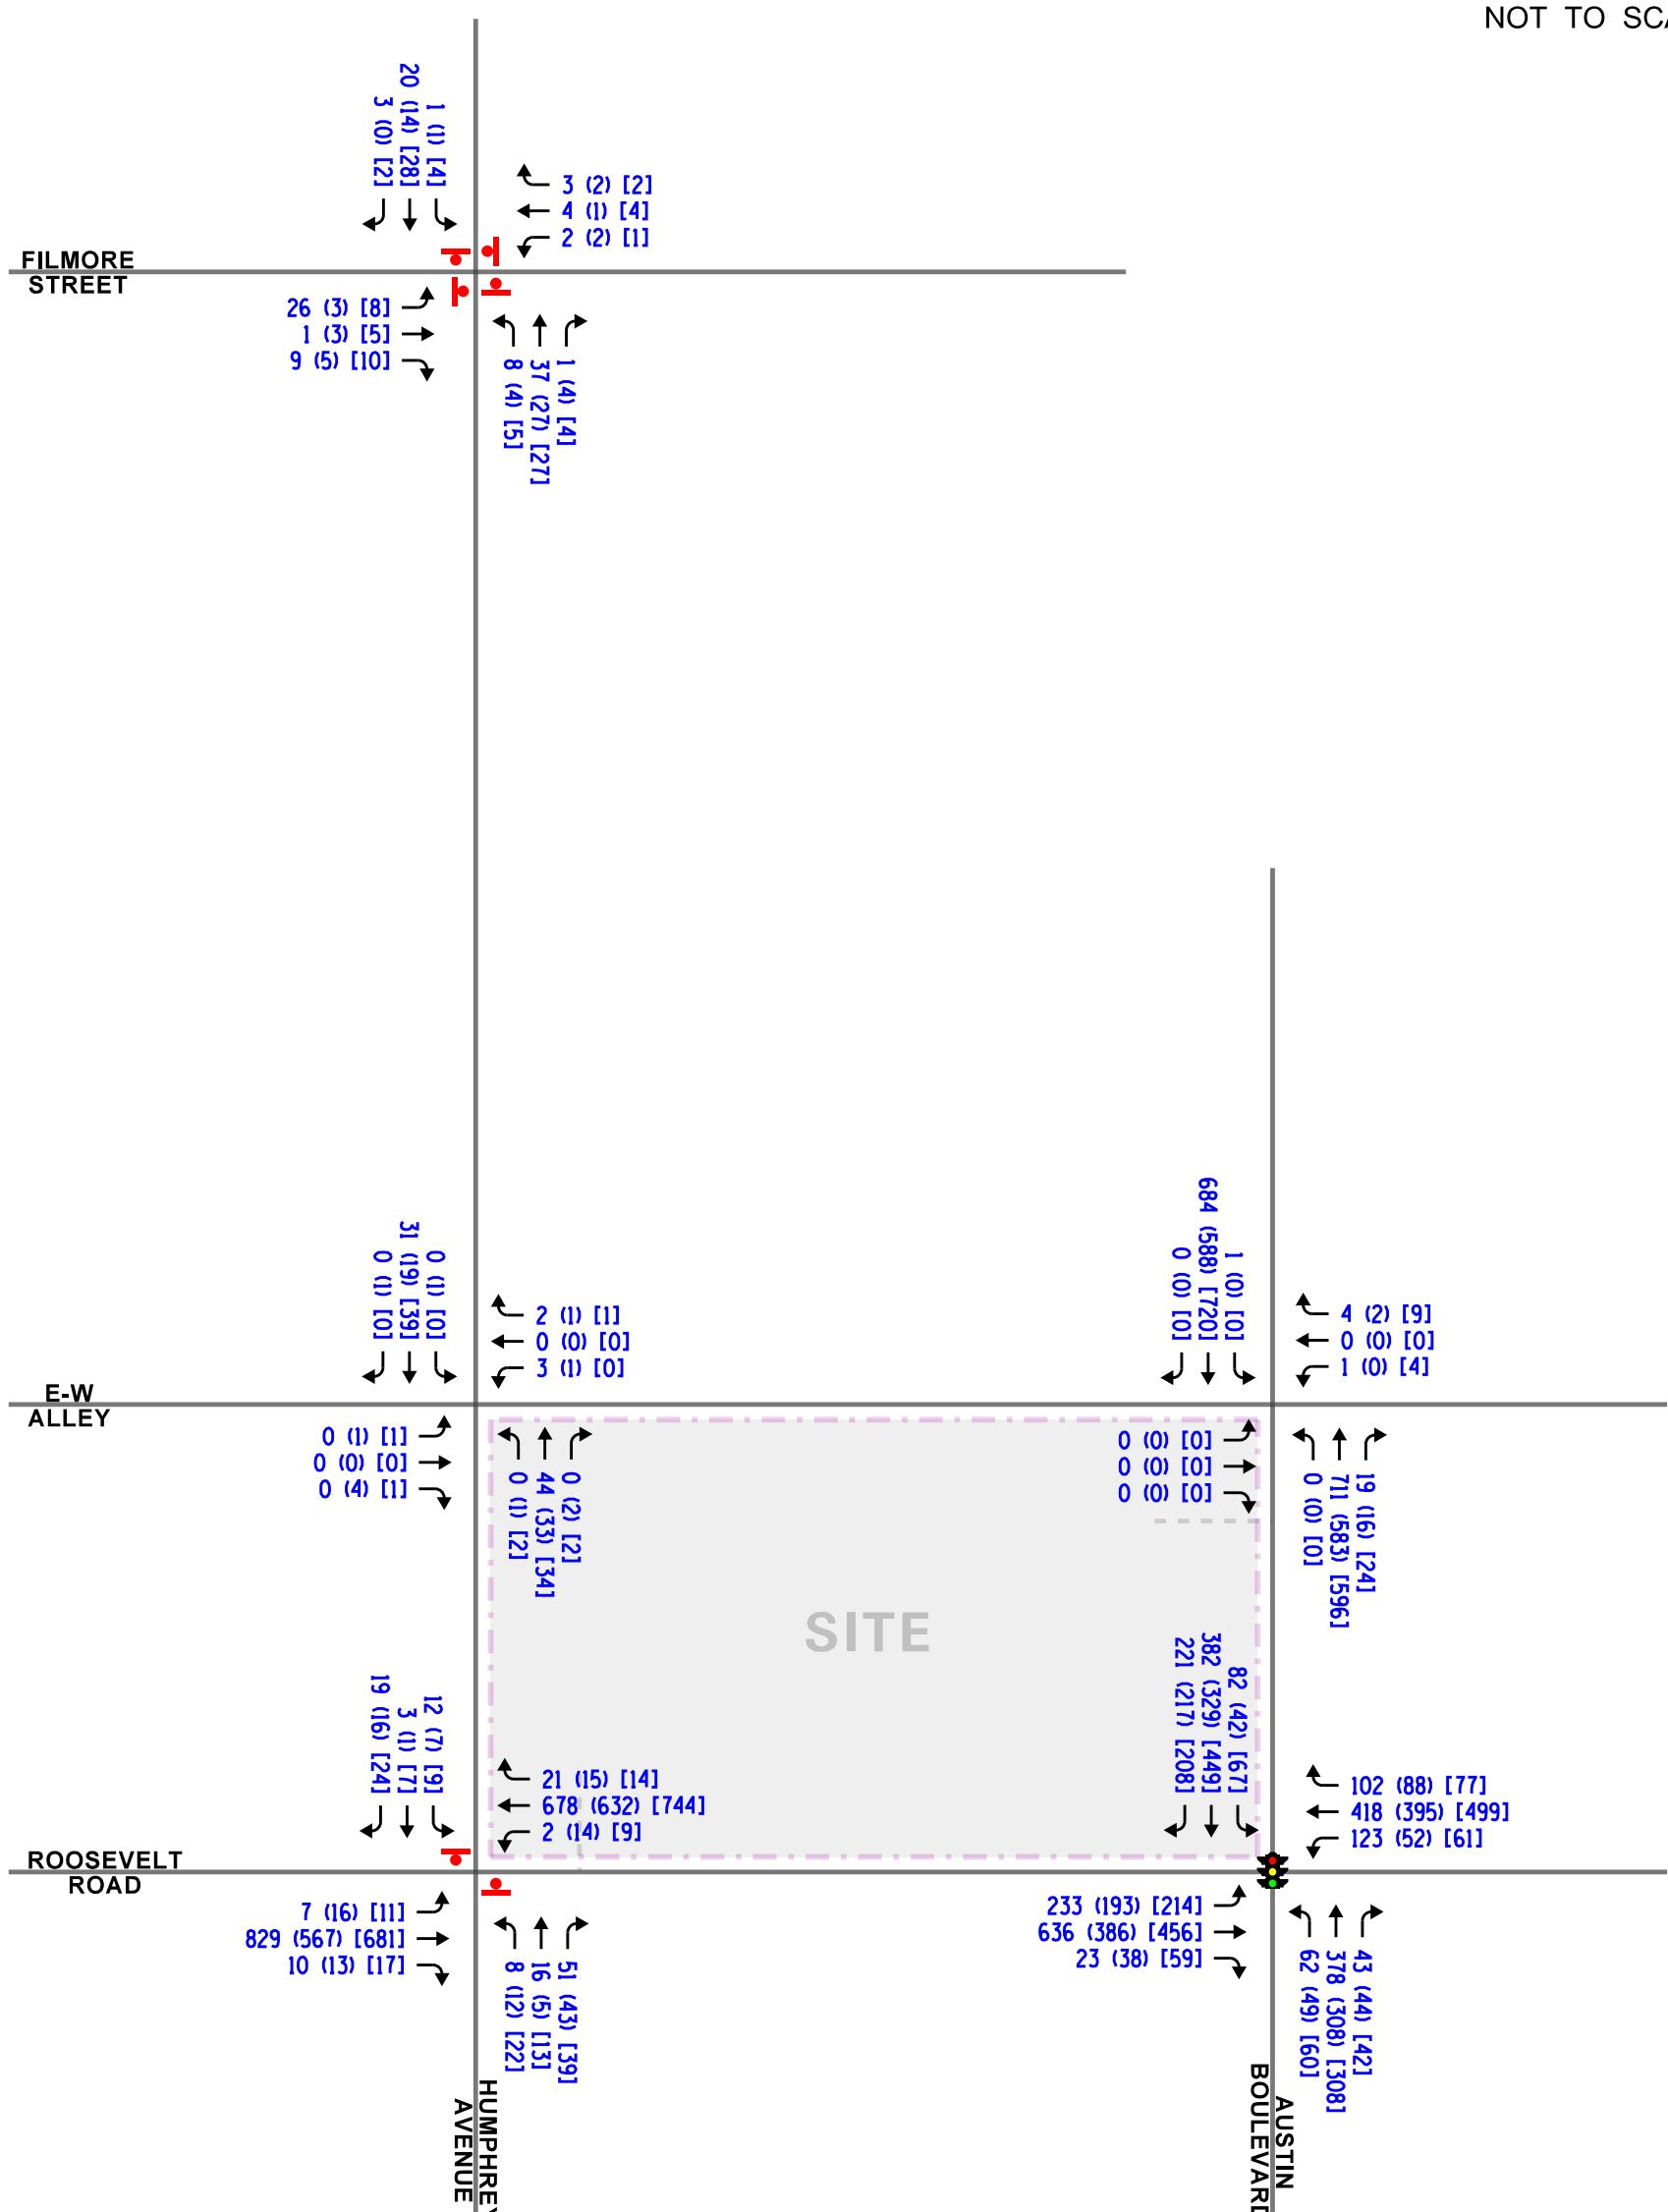

In order to determine current traffic conditions within the study area, KLOA, Inc. conducted peak period traffic counts at the following intersections:

- Roosevelt Road with Austin Boulevard
- Roosevelt Road with Humphrey Avenue/60<sup>th</sup> Street
- Austin Boulevard with the east-west alley
- Humphrey Avenue with Filmore Street
- Humphrey Avenue with the east-west alley

The counts were conducted on Tuesday, February 11, 2020 during the weekday morning (7:00 to 9:00 A.M.), weekday midday (11:30 A.M. to 1:30 P.M.), and weekday evening (3:00 to 7:00 P.M.) peak periods. The results of the traffic counts show that the peak hours of traffic generally occur between 7:00 and 8:00 A.M. during the weekday morning peak period, between 11:45 A.M. and 12:45 P.M. during the weekday midday peak period, and between 5:00 and 6:00 P.M. during the weekday evening peak period. Copies of the traffic count summary sheets are included in the Appendix. **Figure 4** illustrates the existing peak hour vehicle traffic volumes.

## Crash Analysis

KLOA, Inc. obtained crash data<sup>1</sup> for the most recent available past five years (2014 to 2018) for the intersections of Roosevelt Road with Austin Boulevard and Humphrey Avenue/60<sup>th</sup> Street and Humphrey Avenue with Filmore Street. A review of the crash data indicated that one accident occurred at the intersections of Humphrey Avenue with Filmore Street during the review period. Further, no fatalities were reported at any of the studied intersections during the five-year period. **Tables 1** and **2** show a summary of the crash data for the remaining intersections.

<sup>1</sup> IDOT DISCLAIMER: The motor vehicle crash data referenced herein was provided by the Illinois Department of Transportation. Any conclusions drawn from analysis of the aforementioned data are the sole responsibility of the data recipient(s). Additionally, for coding years 2015 to present, the Bureau of Data Collection uses the exact latitude/longitude supplied by the investigating law enforcement agency to locate crashes. Therefore, location data may vary in previous years since data prior to 2015 was physically located by bureau personnel.

### 3. Traffic Characteristics of the Proposed Development

In order to properly evaluate future traffic conditions in the surrounding area, it was necessary to determine the traffic characteristics of the proposed restaurant, including the directional distribution and volumes of traffic that it will generate.

#### Proposed Development Plan

As proposed, the plans call for redeveloping the site with a 2,145 square-foot Taco Bell restaurant with a drive-through lane and 22 parking spaces. The restaurant is proposed to have a one-way counterclockwise drive-through facility that will extend along the west, south, and east sides of the building. As proposed, vehicles will enter the drive-through facility in the northwest corner of the site which will be separated from the by-pass lane by a raised curb. The lane will extend south and then east along the south side of the building. Vehicles will exit the drive-through facility at the northeast corner of the site. Access to the restaurant will be provided as follows:

- A full movement access drive off Roosevelt Road located approximately 260 feet west of Austin Boulevard and 70 feet east of Humphrey Avenue. This access drive will provide one inbound lane and one outbound lanes with outbound movements under stop sign control. As part of the development, the existing westbound left-turn lane on Roosevelt Road serving 60<sup>th</sup> Court will be restriped to provide a two-way left-turn lane serving 60<sup>th</sup> Court and the access drive. This access drive will replace an existing access drive off Roosevelt Road located 185 feet west of Austin Boulevard.
- A full movement access drive off Austin Boulevard located approximately 135 feet north of Roosevelt Road and 30 feet south of the east-west alley. This access drive will provide one inbound lane and one outbound lane with outbound movements under stop sign control. This access drive will replace an existing access drive off Austin Boulevard at this location.

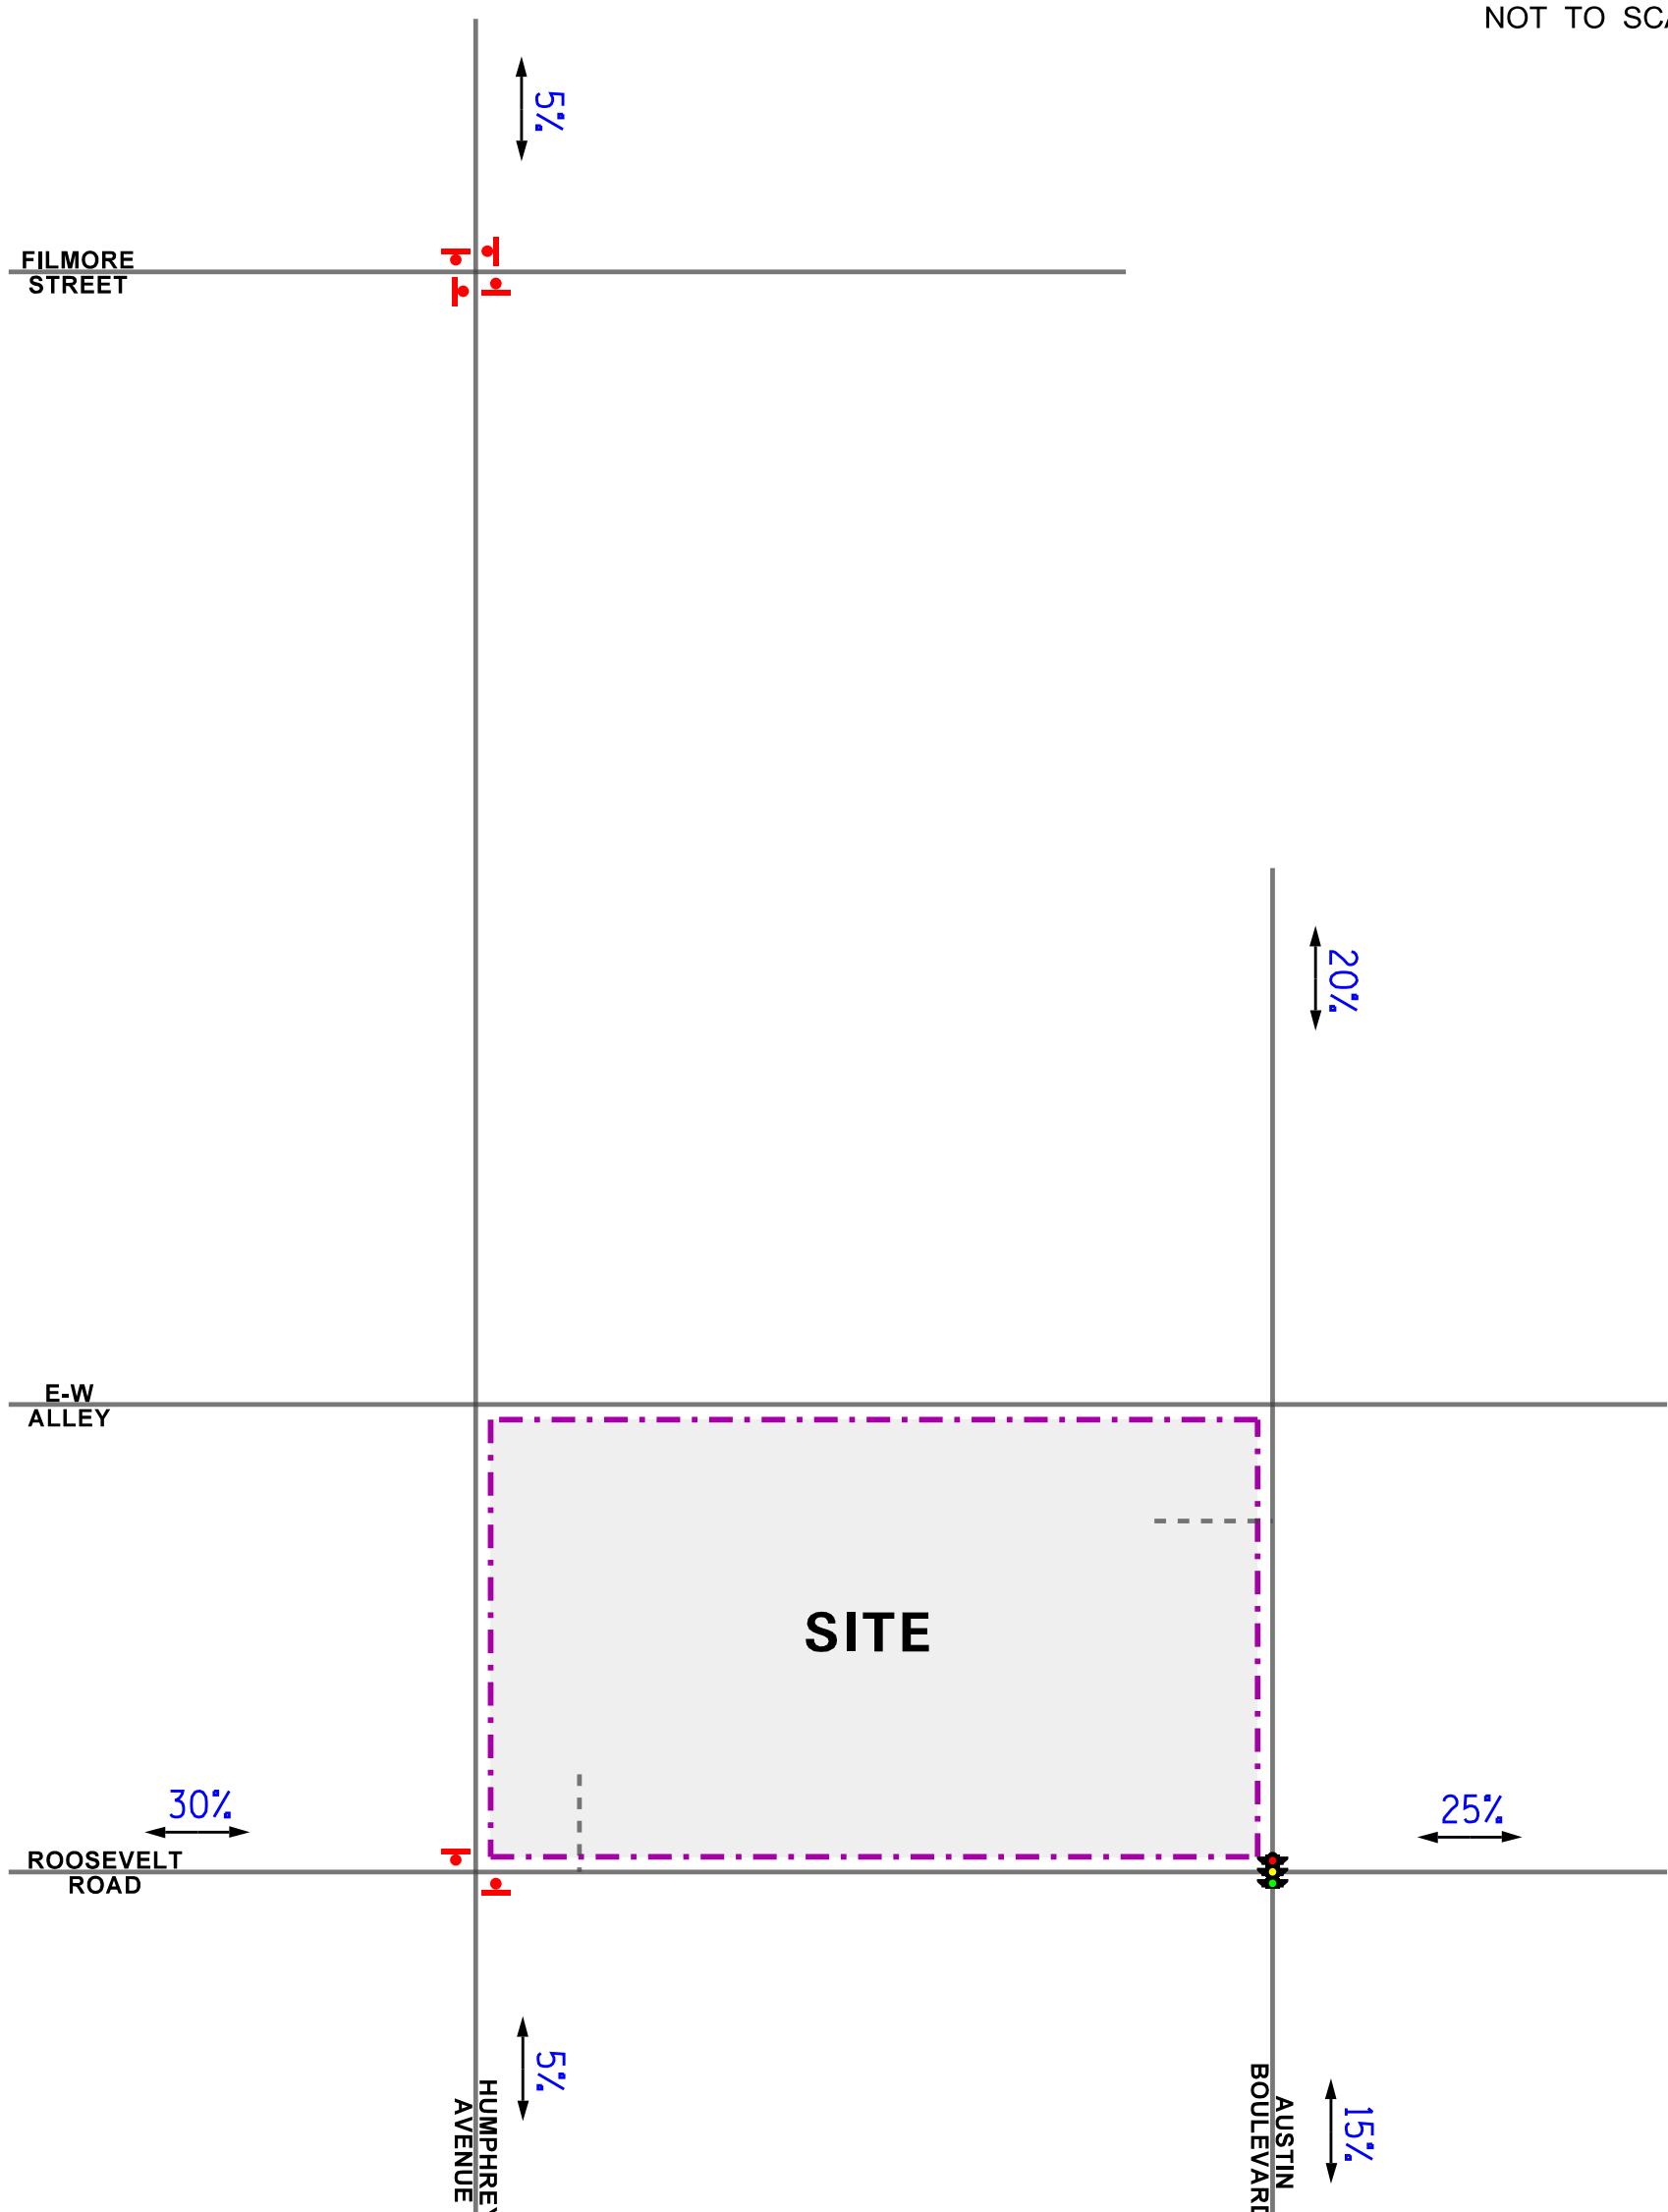

It is important to note that no access drive will be provided on Humphrey Avenue. The lack of access combined with Filmore Street not providing access to Austin Boulevard will minimize the potential of non-local restaurant traffic from traveling through the neighborhood. A copy of the preliminary site plan is included in the Appendix.

#### Directional Distribution

The directions from which patrons and employees will approach and depart the site were estimated based on existing travel patterns, as determined from the traffic counts. **Figure 5** illustrates the directional distribution of the new restaurant-generated traffic.

NOT TO SCALE

LEGEND

00% - PERCENT DISTRIBUTION

TACO BELL  
OAK PARK, ILLINOIS

ESTIMATED DIRECTIONAL DISTRIBUTION

## Peak Hour Traffic Volumes

The number of peak hour trips estimated to be generated by the proposed restaurant was based on vehicle trip generation rates contained in *Trip Generation Manual*, 10<sup>th</sup> Edition, published by the Institute of Transportation Engineers (ITE). The “Fast-Food Restaurant with Drive-Through Window” (Land-Use Code 934) rate was used for the development. Copies of the trip generation worksheets are included in the Appendix.

In addition, it is important to note that surveys conducted by ITE have shown that approximately 50 percent of trips made to fast food restaurants are diverted from the existing traffic on the roadway system. This is particularly true during the weekday morning and evening peak hours when traffic is diverted from the home-to-work and work-to-home trips. As such, the number of new trips to be generated by the restaurant was reduced by 50 percent to account for pass-by traffic. **Table 3** summarizes the trips projected to be generated by the proposed development.

Table 3

## 4. Projected Traffic Conditions

The total projected traffic volumes include the existing traffic volumes, increase in background traffic due to growth, and the traffic estimated to be generated by the proposed subject restaurant.

### Restaurant Traffic Assignment

The estimated traffic volumes that will be generated by the proposed restaurant were assigned to the roadway system in accordance with the previously described directional distribution (Figure 5). **Figure 6** illustrates the traffic assignment of the total new trips. As previously indicated, a 50 percent pass-by reduction was applied. **Figure 7** illustrates the traffic assignment of the pass-by trips.

As discussed earlier, site traffic traveling through the adjacent neighborhood will be limited to local traffic only.

### Background Traffic Conditions

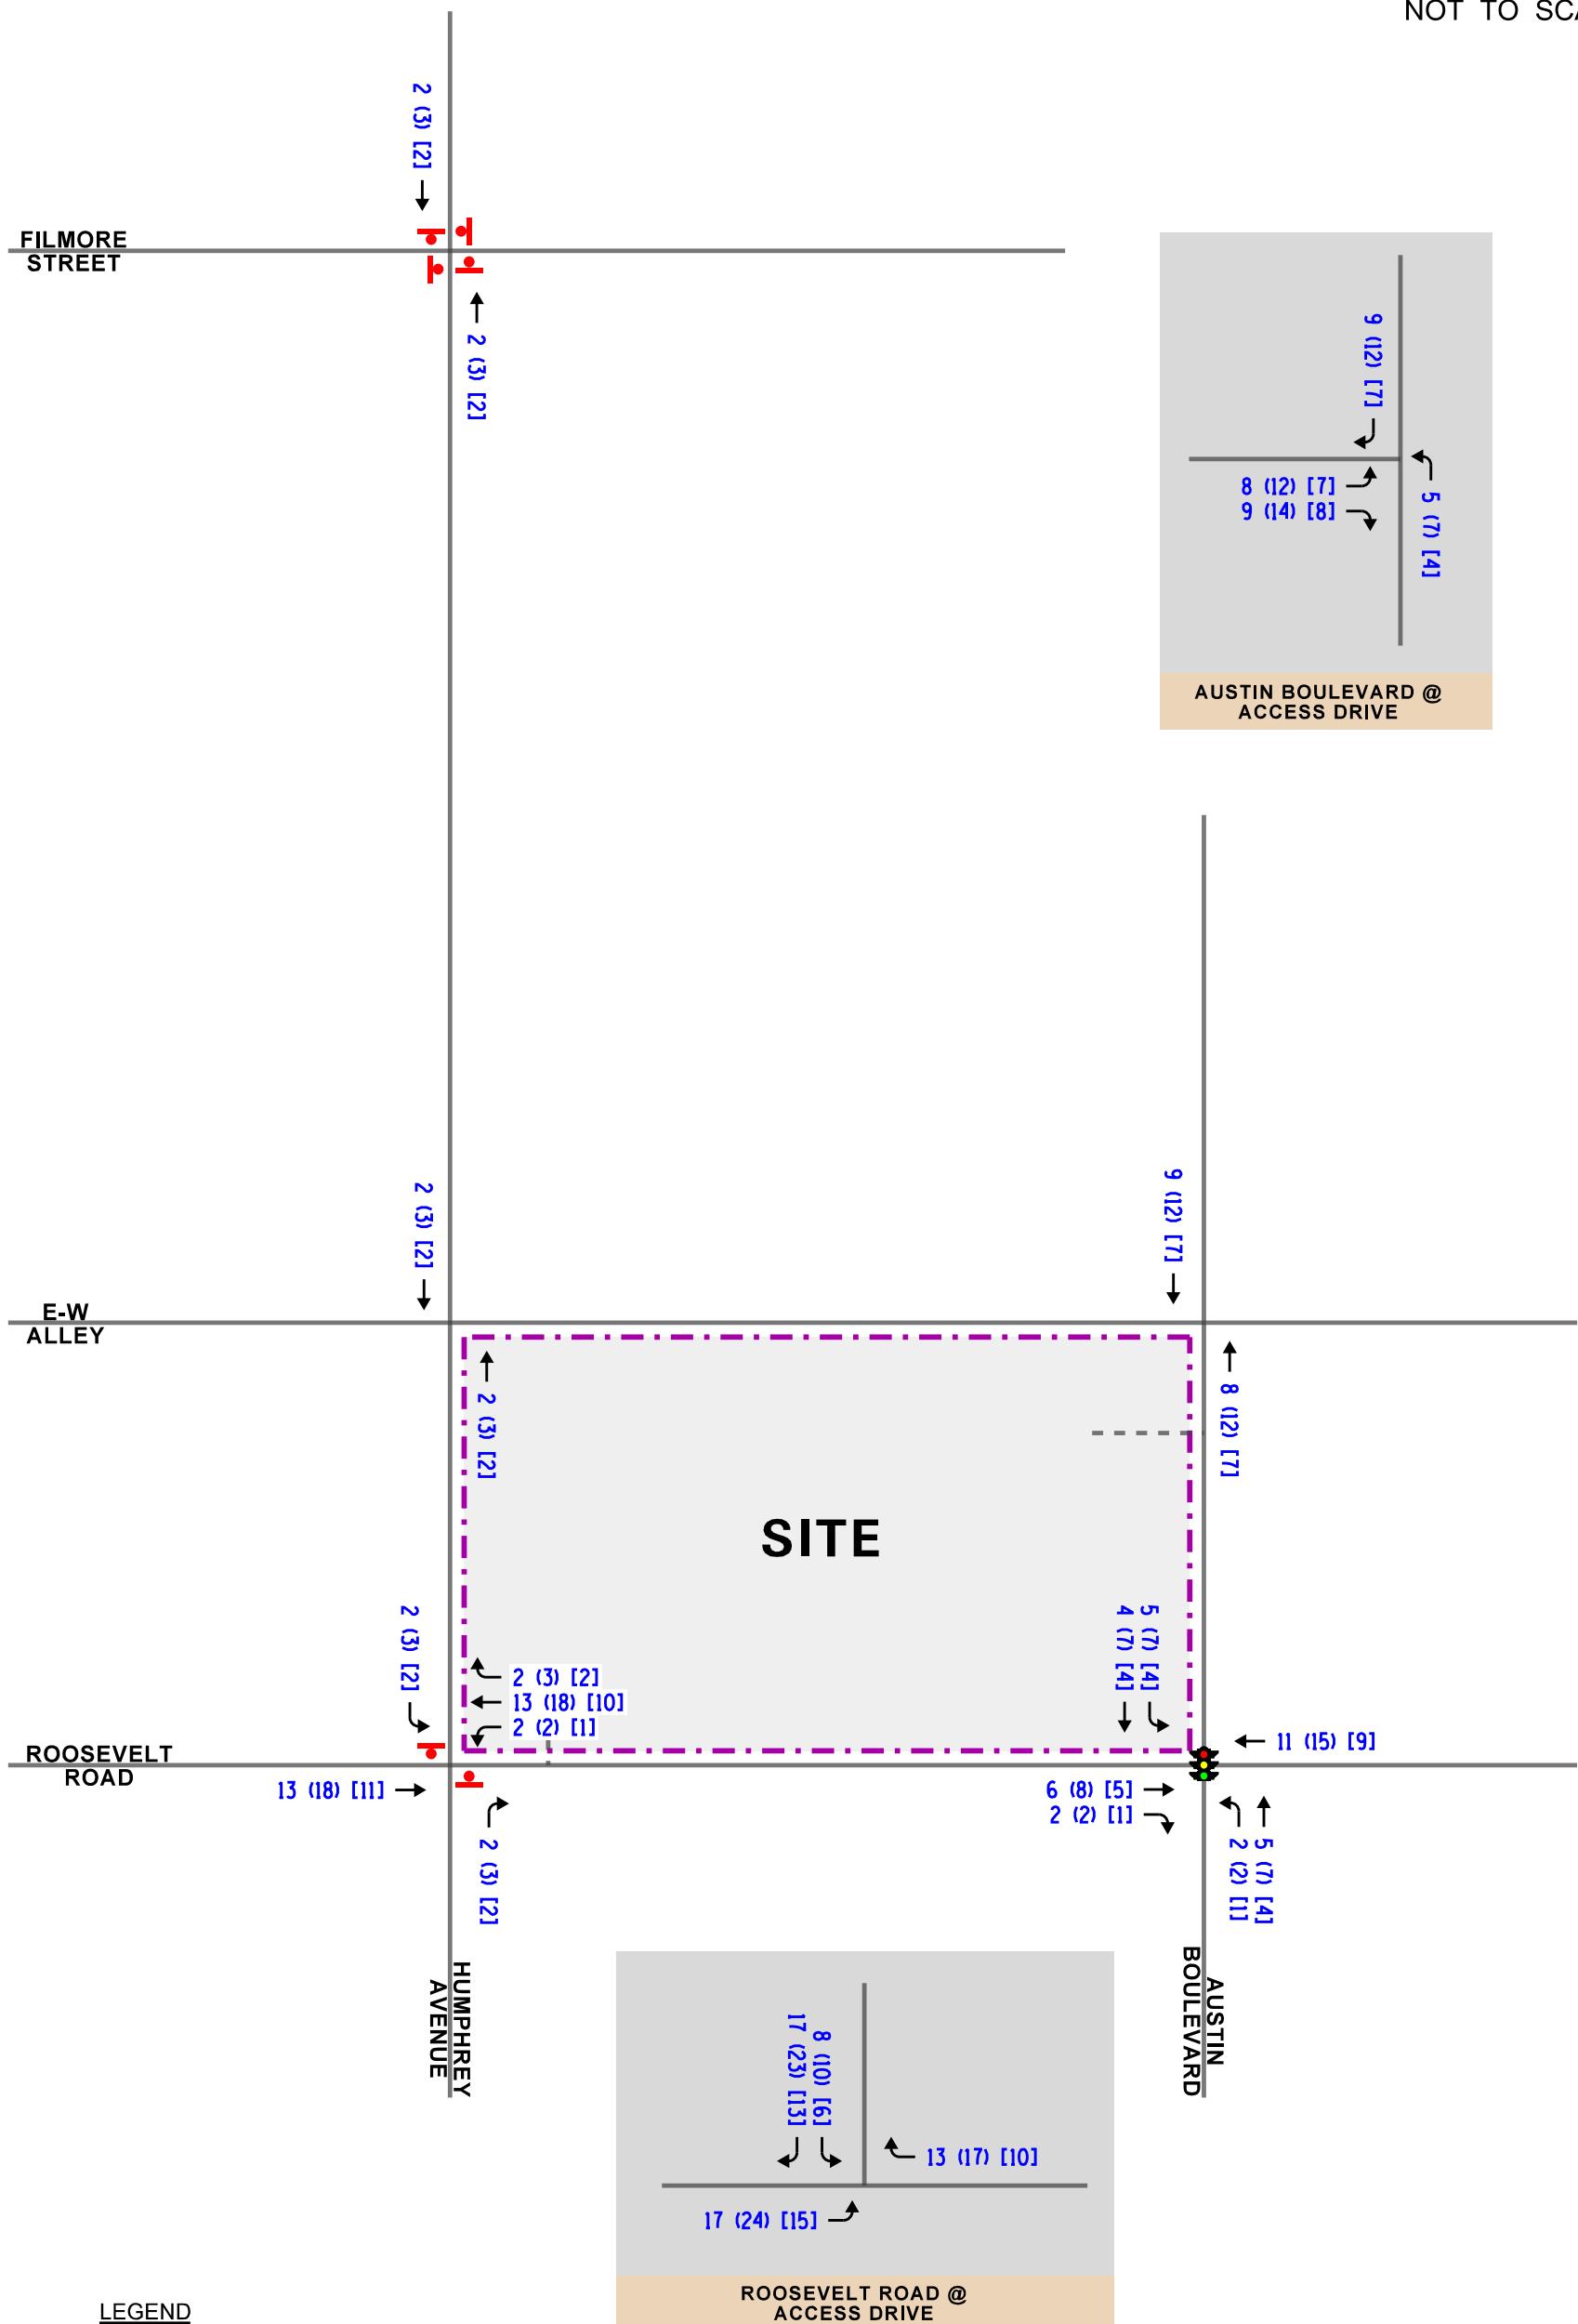

The existing traffic volumes (Figure 4) were increased by a regional growth factor to account for the increase in existing traffic related to regional growth in the area (i.e., not attributable to any particular planned development). Based on 2050 Average Daily Traffic (ADT) projections provided by the Chicago Metropolitan Agency for Planning (CMAP) in a letter dated February 19, 2020, the existing traffic volumes are projected to increase annually by a compounded growth rate of approximately 0.1 percent. In order to be conservative when projecting Year 2026 conditions (one-year buildout plus five years), a total increase of 1.0 percent was used. A copy of the CMAP 2050 projections letter is included in the Appendix. The Year 2026 no-build traffic volumes, which include the existing traffic volumes increased by the regional growth factor of 1.0 percent, are illustrated in **Figure 8**.

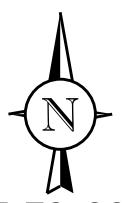

### Total Projected Traffic Volumes

The restaurant-generated traffic (Figures 6 and 7) was added to the existing traffic volumes accounting for ambient background growth (Figure 8) to determine the Year 2026 total projected traffic volumes, as shown in **Figure 9**.

## 5. Traffic Analysis and Recommendations

The following provides an evaluation conducted for the weekday morning, weekday midday, and weekday evening peak hours. The analysis includes conducting capacity analyses to determine how well the roadway system and access drives are projected to operate and whether any roadway improvements or modifications are required.

### Traffic Analyses

Roadway and adjacent or nearby intersection analyses were performed for the weekday morning, weekday midday, and weekday evening peak hours for the existing (Year 2020), no-build, and Year 2026 total projected traffic volumes.

The traffic analyses were performed using the methodologies outlined in the Transportation Research Board's *Highway Capacity Manual (HCM)*, 6<sup>th</sup> Edition and analyzed using the Synchro/SimTraffic 10 software. The analysis for the traffic-signal controlled intersections were accomplished using actual cycle lengths and phasings to determine the average overall vehicle delay and levels of service.

The analyses for the unsignalized intersections determine the average control delay to vehicles at an intersection. Control delay is the elapsed time from a vehicle joining the queue at a stop sign (includes the time required to decelerate to a stop) until its departure from the stop sign and resumption of free flow speed. The methodology analyzes each intersection approach controlled by a stop sign and considers traffic volumes on all approaches and lane characteristics.

The ability of an intersection to accommodate traffic flow is expressed in terms of level of service, which is assigned a letter from A to F based on the average control delay experienced by vehicles passing through the intersection. The *Highway Capacity Manual* definitions for levels of service and the corresponding control delay for signalized intersections and unsignalized intersections are included in the Appendix of this report.

Summaries of the traffic analysis results showing the level of service and overall intersection delay (measured in seconds) for the existing, no-build, and total projected conditions are presented in **Tables 4** through **7**. A discussion of each intersection follows. Summary sheets for the capacity analyses are included in the Appendix.

## Discussion and Recommendations

The following summarizes how the intersections are projected to operate and identifies any roadway and traffic control improvements necessary to accommodate the restaurant-generated traffic.

### *Roosevelt Road with Austin Boulevard*

The results of the capacity analysis indicate that overall this intersection currently operates at Level of Service (LOS) D during the weekday morning peak hour, weekday midday, and weekday evening peak hours. It should be noted that 95<sup>th</sup> percentile queues for the southbound approach are between approximately 250 and 300 feet during the peak hours and block the location of the proposed access drive off Austin Boulevard. Further, eastbound 95<sup>th</sup> percentile queues extend up to 705 feet during the weekday morning, 385 feet during the weekday midday, and 480 feet during the weekday evening peak hours, similarly blocking the proposed access drive off Roosevelt Road. However, these approaches operate at a good LOS D or better and the queues were observed to typically clear the intersection with every green phase.

Under Year 2026 no-build conditions, this intersection is projected to continue to operate at LOS D during all three peak hours with an increase in delay of three seconds or less over existing conditions. Further, all approaches are projected to continue to operate at the same LOS as existing conditions.

Under Year 2026 total projected conditions, this intersection is projected to continue to operate at LOS D during the weekday morning, weekday midday, and weekday evening peak hours with an increase in delay of less than one second over Year 2026 no-build conditions. In addition, all movements are projected to continue to operate at the same LOS as Year 2026 no-build conditions. Further 95<sup>th</sup> percentile queues for the southbound and eastbound approaches are projected to increase by five to 25 feet over existing conditions, or approximately one car length, and will continue to typically clear the intersection with each green phase. As such, this intersection has sufficient reserve capacity to accommodate traffic expected to be generated by the development and no signal or geometric improvements will be required.

### *Roosevelt Road with Humphrey Avenue/60<sup>th</sup> Court*

The results of the capacity analysis indicate that the critical movements at this intersection operate at LOS C or better during the weekday morning, weekday midday, and weekday evening peak hours. Under Year 2026 no-build conditions, all critical movements at this intersection are projected to continue to operate the same LOS during both peak hours with an increase in delay of less than one second.

Under Year 2026 total projected conditions, all critical movements are projected to continue to operate at the same LOS with an increase in delay of two seconds. Further, eastbound and westbound left-turn movements from Roosevelt Road operate at LOS B or better under existing conditions and are projected to continue to do so. In addition, 95<sup>th</sup> percentile queues for the movement are not projected to exceed one vehicle, which can be accommodated by the proposed turn lane. As such, this intersection has sufficient reserve capacity to accommodate the traffic projected to be generated by the proposed development and no roadway or traffic control improvements will be required.

#### *Austin Boulevard with the East-West Alley*

The results of the capacity analysis indicate that the westbound approach at this intersection currently operates at LOS C during the weekday morning, weekday midday, and weekday evening peak hours and the southbound left turn operates at LOS A. As previously mentioned, the west leg of this intersection is gated and signed for no entry, and, as a result, carries no traffic.

Under Year 2026 no-build conditions, all critical movements at this intersection are projected to continue to operate the same LOS during both peak hours with an increase in delay of less than one second.

Under Year 2026 total projected conditions the westbound approach is projected to continue to operate at LOS C during all three peak hours with an increase in delay of less than one second over existing and no-build conditions. Further, the southbound left-turn movement is projected to continue to operate at LOS with an increase in delay of less than one second and 95<sup>th</sup> percentile queues of one to two vehicles. It is important to note that, while the alley is close to the location of the proposed access drive, the east leg of the alley is positively offset from the proposed drive and left-turn movements on Austin Boulevard waiting to turn on to the alley will not conflict with traffic waiting to enter the site. This offset, combined with the west leg being gated and the low volume of traffic that utilize the east leg of the alley indicate that the proximity of the proposed access drive to the east-west alley will not impact the operations of the alley or the access drive. As such, this intersection has sufficient reserve capacity to accommodate the traffic projected to be generated by the proposed development and no roadway or traffic control improvements will be required.

#### *Humphrey Avenue with Filmore Street*

The results of the capacity analysis indicate that overall this intersection currently operates at LOS A during the weekday morning, weekday midday, and weekday evening peak hours. Furthermore, all of the approaches currently operate at LOS A during the peak hours. Under Year 2026 no-build conditions, this intersection overall is projected to operate at LOS A during all three peak hours with increases in delay of less than one second.

Under Year 2026 total projected conditions, this intersection is projected to operate at LOS A during the weekday morning, weekday midday, and weekday evening peak hour with increases in delay of less than one second over no-build conditions. Additionally, all of the approaches are projected to continue operating at LOS A during the peak hours. It is important to note that, as previously mentioned, all traffic assigned to this intersection is expected to be local traffic from within the neighborhood. As such, this intersection has sufficient reserve capacity to accommodate the traffic projected to be generated by the proposed development and no roadway or traffic control improvements will be required.

#### *Humphrey Avenue with the East-West Alley*

The results of the capacity analysis indicate that all critical movements at this intersection currently operate at LOS A during the weekday morning, weekday midday, and weekday evening peak hours. Under Year 2026 no-build conditions, all critical movements at this intersection are projected to continue to operate at the same LOS during all three peak hours with an increase in delay of less than one second.

Under Year 2026 total projected conditions, all critical movements are projected to continue to operate at LOS A during all three peak hours with an increase in delay of less than one second over existing and no-build conditions. As with the intersection of Humphrey Avenue and Filmore Street, the low volume of traffic projected to be added to this intersection is expected to be local traffic from within the neighborhood. As such, this intersection has sufficient reserve capacity to accommodate the traffic projected to be generated by the proposed development and no roadway or traffic control improvements will be required.

#### *Roosevelt Road with the Proposed Site Access Drive*

As proposed, a full movement access drive serving the site will be provided off Roosevelt Road located approximately 260 feet west of Austin Boulevard and 70 feet east of Humphrey Avenue. This access drive will provide one inbound lane and one outbound lane with outbound movements under stop sign control. As part of the development, the existing westbound left-turn lane on Roosevelt Road serving 60<sup>th</sup> Court will be restriped to provide a two-way left-turn lane serving 60<sup>th</sup> Court and the access drive.

Under Year 2026 total projected conditions, the outbound movements from this access drive are projected to operate at LOS C during the weekday morning and weekday midday peak hours and LOS D during the weekday evening peak hour. It is important to note that eastbound 95<sup>th</sup> percentile left-turn queues at this access drive are not projected to exceed one vehicle, which can be accommodated by the proposed two-way left-turn lane on Roosevelt Road and, as such, will not conflict with the existing westbound left-turn movements at the intersection of Roosevelt Road with 60<sup>th</sup> Court which will also utilize the two way left turn lane. As previously mentioned, 95<sup>th</sup> percentile eastbound queues from the intersection of Roosevelt Road with Austin Boulevard currently extend to the location of this access drive and are projected to continue to do so. However, these queues will continue to clear the location of the proposed access drive with every green cycle, allowing site traffic to exit the site.

When the projected traffic volumes are compared to the turn lane warrant guidelines published in Chapter 36 of the IDOT *Bureau of Design and Environment* (BDE) Manual, a westbound right-turn lane is not warranted at this access drive during any of the three peak hours. As such, the proposed access drive will adequately accommodate site-generated traffic.

#### *Austin Boulevard with the Proposed Site Access Drive*

As proposed, a full movement access drive serving the site will be provided off Austin Boulevard located approximately 135 feet north of Roosevelt Road and 30 feet south of the east-west alley. This access drive will provide one inbound lane and one outbound lane with outbound movements under stop sign control. This access drive will replace an existing access drive off Austin Boulevard at this location.

Under Year 2026 total projected conditions, the outbound movements from this access drive are projected to operate at LOS C during the weekday morning, weekday midday, and weekday evening peak hours. As previously mentioned, the southbound 95<sup>th</sup> percentile queues from the intersection of Roosevelt Road with Austin Boulevard are projected to extend to this location. These queues may prevent outbound vehicles from exiting the site as well as prevent inbound left-turn vehicles from entering. In order to improve operations of this intersection and reduce the impact of inbound left-turning vehicles on through traffic on Austin Boulevard, a “do not block intersection” sign should be provided for southbound traffic on Austin Boulevard indicating that vehicles should not stop within the intersection of the access drive with Austin Boulevard. With the provision of this restriction and given that the southbound queues on Roosevelt Road will continue to clear the location of the proposed access drive with every green cycle, it is anticipated that site traffic will be able to enter and exit the site efficiently.

When the projected traffic volumes are compared to the turn lane warrant guidelines published in Chapter 36 of the IDOT *Bureau of Design and Environment* (BDE) Manual, neither a southbound right-turn lane nor a northbound left-turn lane is warranted at this access drive. As such, the proposed access drive will adequately accommodate site-generated traffic.

#### **On-Site Circulation and Drive-Through Evaluation**

Under the proposed plan, the Taco Bell restaurant will provide a two-way drive aisle along the east and north sides of the site and a one-way by-pass lane along the east and south sides of the site. The provision of the two-way drive aisle as well as the by-pass lane will ensure that flexible on-site circulation is provided, allowing customers to enter or exit the site at either access drive.

The drive-through lane for the Taco Bell restaurant, which will run parallel to the by-pass lane, will also have a counterclockwise flow with stacking for approximately eight vehicles (three from the pick-up window and five from the ordering board) with the potential for an additional 12 vehicles to queue on-site for a total stacking of 20 vehicles.

Based on observations conducted by KLOA, Inc. at fast-food restaurants in the Chicago Area, the restaurant is expected to peak during the midday lunchtime period with an average drive-through lane queue of 11 to 13 vehicles and a maximum queue of approximately 14 vehicles. Therefore, the proposed drive-through stacking of 20 vehicles will be sufficient to accommodate the peak demand. In order to ensure that drive-through traffic can exit the lane with minimal delays and without impacting drive-through operations, a “Do Not Block Intersection” sign should be posted for eastbound traffic to ensure that the area in front of the drive-through exit remains clear of queued vehicles. Furthermore, a stop sign should be provided for exiting traffic as well as a “Do Not Enter” sign to enforce the one-way circulation.

## 6. Conclusion

Based on the preceding analyses and recommendations, the following conclusions have been made:

- The volume of new traffic estimated by the proposed restaurant will be reduced due to the volume of pass-by trips.
- The intersection of Roosevelt Road with Austin Boulevard has sufficient reserve capacity to accommodate the traffic projected to be generated by the proposed restaurant.
- The site generated traffic that will travel along Humphrey Avenue is expected to be local traffic with new traffic entering and exiting the proposed restaurant utilizing Roosevelt Road and Austin Boulevard.
- The proposed access system will provide flexible and efficient access to and from the site.
- A “Do Not Block Intersection” sign should be provided on Austin Boulevard at the proposed site access drive.
- The drive-through lane, as proposed, will be adequate in accommodating the projected drive-through demand.

#### ZONING ANALYSIS

Adopted September 18, 2017

**ZONING:**  
Proposed development is currently zoned as RR-T  
Form based Zone - Roosevelt Road Transitional District

**USE:**  
General commercial is PERMITTED

**DIMENSIONAL AND DESIGN STANDARDS:**  
Maximum Height - 3 stories & 40'  
Proposed - 24'

**BUILDING PLACEMENT:**  
Front setback (Roosevelt Road) - 2.5'  
Proposed - 2.5'

Side and rear setbacks - 0' (Min)  
Proposed side setbacks - 47'-9" (West) / 185'-8 1/2" (East)  
Proposed rear setback - 38'-6 1/2"

**PARKING PLACEMENT:**  
Minimum front setback for parking spaces located adjacent to buildings - 7'  
Provided - 10'

**OFF-STREET PARKING DESIGN STANDARDS**  
Required parking for restaurants - 1 per 500sf GFA  
(2150) = 5  
Provided - 31

**EXHIBIT NO. 7  
SITE PLAN**

**SP1.0**

PLOT DATE:

TACO BELL  
6000 ROOSEVELT RD  
OAK PARK, IL 60304

## ITE Trip Generation Sheets

## **Land Use: 934**

### **Fast-Food Restaurant with Drive-Through Window**

#### **Description**

This category includes fast-food restaurants with drive-through windows. This type of restaurant is characterized by a large drive-through clientele, long hours of service (some are open for breakfast, all are open for lunch and dinner, some are open late at night or 24 hours a day) and high turnover rates for eat-in customers. These limited-service eating establishments do not provide table service. Non-drive-through patrons generally order at a cash register and pay before they eat. Fast casual restaurant (Land Use 930), high-turnover (sit-down) restaurant (Land Use 932), fast-food restaurant without drive-through window (Land Use 933), and fast-food restaurant with drive-through window and no indoor seating (Land Use 935) are related uses.

#### **Additional Data**

*Users should exercise caution when applying statistics during the AM peak periods, as the sites contained in the database for this land use may or may not be open for breakfast. In cases where it was confirmed that the sites were not open for breakfast, data for the AM peak hour of the adjacent street traffic were removed from the database.*

The outdoor seating area is not included in the overall gross floor area. Therefore, the number of seats may be a more reliable independent variable on which to establish trip generation rates for facilities having significant outdoor seating.

Time-of-day distribution data for this land use for a weekday, Saturday, and Sunday are presented in Appendix A. For the 46 general urban/suburban sites with data, the overall highest vehicle volumes during the AM and PM on a weekday were counted between 11:45 a.m. and 12:45 p.m. and 12:00 and 1:00 p.m., respectively. For the one dense multi-use urban site with data, the same AM and PM peak hours were observed.

The sites were surveyed in the 1980s, the 1990s, the 2000s, and the 2010s in Alaska, Alberta (CAN), California, Colorado, Florida, Indiana, Kentucky, Maryland, Massachusetts, Minnesota, Montana, New Hampshire, New Jersey, New York, North Carolina, Ohio, Pennsylvania, South Dakota, Texas, Vermont, Virginia, Washington, and Wisconsin.

Rosemont, IL 60018

**Subject: Roosevelt Road @ Austin Boulevard**  
IDOT

Dear Mr. Bowen:

In response to a request made on your behalf and dated February 18, 2020, we have developed year 2050 average daily traffic (ADT) projections for the subject location.

| ROAD SEGMENT                      | Current Volumes | Year 2050 ADT |
|-----------------------------------|-----------------|---------------|
| Roosevelt Rd west of Austin Blvd  | 19,000          | 19,800        |
| Roosevelt Rd east of Austin Blvd  | 17,700          | 18,400        |
| Austin Blvd north of Roosevelt Rd | 20,700          | 21,300        |
| Austin Blvd south of Roosevelt Rd | 15,800          | 16,500        |

Traffic projections are developed using existing ADT data provided in the request letter and the results from the October 2019 CMAP Travel Demand Analysis. The regional travel model uses CMAP 2050 socioeconomic projections and assumes the implementation of the ON TO 2050 Comprehensive Regional Plan for the Northeastern Illinois area. The provision of this data in support of your request does not constitute a CMAP endorsement of the proposed development or any subsequent developments.

If you have any questions, please call me at (312) 386-8806.

Sincerely,

A handwritten signature in black ink, appearing to read "J. Rodriguez".

## Level of Service Criteria

### LEVEL OF SERVICE CRITERIA

#### **Signalized Intersections**

| Level of Service | Interpretation   | Average Control Delay (seconds per vehicle) |
|------------------|--|---|
| A                | Favorable progression. Most vehicles arrive during the green indication and travel through the intersection without stopping.  | $\leq 10$                                   |
| B                | Good progression, with more vehicles stopping than for Level of Service A.   | $>10 - 20$                                  |
| C                | Individual cycle failures (i.e., one or more queued vehicles are not able to depart as a result of insufficient capacity during the cycle) may begin to appear. Number of vehicles stopping is significant, although many vehicles still pass through the intersection without stopping. | $>20 - 35$                                  |
| D                | The volume-to-capacity ratio is high and either progression is ineffective or the cycle length is too long. Many vehicles stop and individual cycle failures are noticeable.   | $>35 - 55$                                  |
| E                | Progression is unfavorable. The volume-to-capacity ratio is high and the cycle length is long. Individual cycle failures are frequent.   | $>55 - 80$                                  |
| F                | The volume-to-capacity ratio is very high, progression is very poor, and the cycle length is long. Most cycles fail to clear the queue.  | $>80.0$                                     |

#### **Unsignalized Intersections**

| Level of Service | Average Total Delay (SEC/VEH) |
|------------------|-------------------------------|
| A                | $0 - 10$                      |
| B                | $> 10 - 15$                   |
| C                | $> 15 - 25$                   |
| D                | $> 25 - 35$                   |
| E                | $> 35 - 50$                   |
| F                | $> 50$                        |

#### Intersection Summary

Area Type: Other

Cycle Length: 115

Actuated Cycle Length: 115

Offset: 22.5 (20%), Referenced to phase 2:EBTL and 6:WBTL, Start of Green

Natural Cycle: 90

Control Type: Actuated-Coordinated

Maximum v/c Ratio: 0.95

Intersection Signal Delay: 44.7

Intersection LOS: D

Intersection Capacity Utilization 85.6%

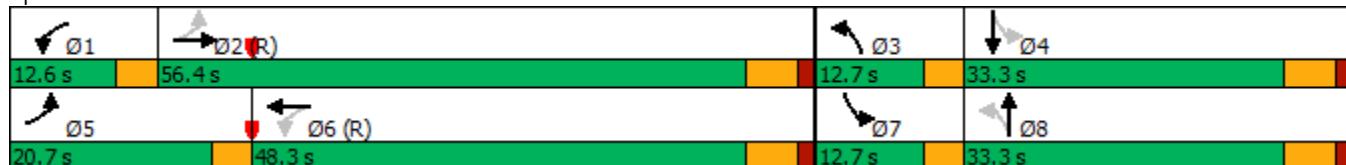

ICU Level of Service E

Analysis Period (min) 15

# 95th percentile volume exceeds capacity, queue may be longer.

Queue shown is maximum after two cycles.

Splits and Phases: 1: Austin Boulevard & Roosevelt Road

#### Intersection Summary

Area Type: Other

Cycle Length: 110

Actuated Cycle Length: 110

Offset: 22.5 (20%), Referenced to phase 2:EBTL and 6:WBTL, Start of Green

Natural Cycle: 75

Control Type: Actuated-Coordinated

Maximum v/c Ratio: 0.85

Intersection Signal Delay: 37.0

Intersection LOS: D

Intersection Capacity Utilization 76.4%

ICU Level of Service D

Analysis Period (min) 15

# 95th percentile volume exceeds capacity, queue may be longer.

Queue shown is maximum after two cycles.

Splits and Phases: 1: Austin Boulevard & Roosevelt Road

#### Intersection Summary

Area Type: Other

Cycle Length: 115

Actuated Cycle Length: 115

Offset: 22.5 (20%), Referenced to phase 2:EBTL and 6:WBTL, Start of Green

Natural Cycle: 75

Control Type: Actuated-Coordinated

Maximum v/c Ratio: 0.83

Intersection Signal Delay: 40.4

Intersection LOS: D

Intersection Capacity Utilization 82.7%

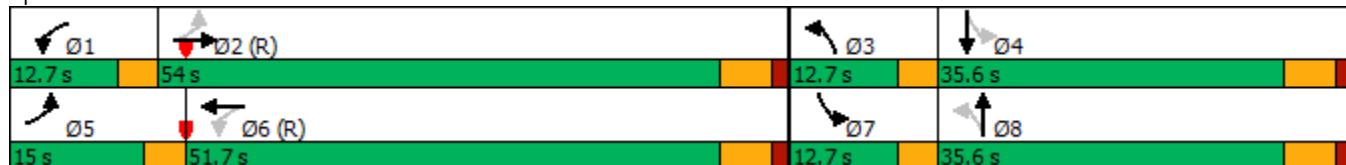

ICU Level of Service E

Analysis Period (min) 15

# 95th percentile volume exceeds capacity, queue may be longer.

Queue shown is maximum after two cycles.

Splits and Phases: 1: Austin Boulevard & Roosevelt Road

#### Intersection Summary

Area Type: Other

Cycle Length: 115

Actuated Cycle Length: 115

Offset: 22.5 (20%), Referenced to phase 2:EBTL and 6:WBTL, Start of Green

Natural Cycle: 90

Control Type: Actuated-Coordinated

Maximum v/c Ratio: 0.97

Intersection Signal Delay: 47.7

Intersection LOS: D

Intersection Capacity Utilization 88.2%

ICU Level of Service E

Analysis Period (min) 15

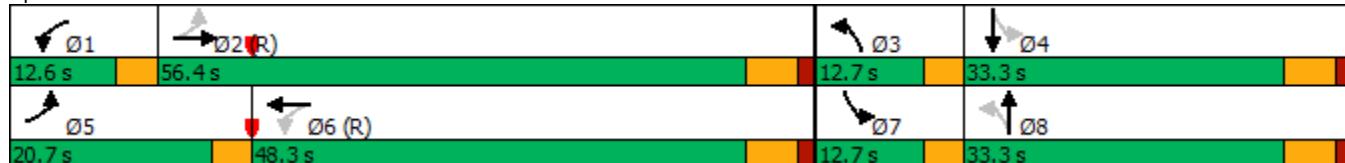

~ Volume exceeds capacity, queue is theoretically infinite.

Queue shown is maximum after two cycles.

# 95th percentile volume exceeds capacity, queue may be longer.

Queue shown is maximum after two cycles.

Splits and Phases: 1: Austin Boulevard & Roosevelt Road

#### Intersection Summary

Area Type: Other

Cycle Length: 110

Actuated Cycle Length: 110

Offset: 22.5 (20%), Referenced to phase 2:EBTL and 6:WBTL, Start of Green

Natural Cycle: 80

Control Type: Actuated-Coordinated

Maximum v/c Ratio: 0.85

Intersection Signal Delay: 37.3

Intersection LOS: D

Intersection Capacity Utilization 77.0%

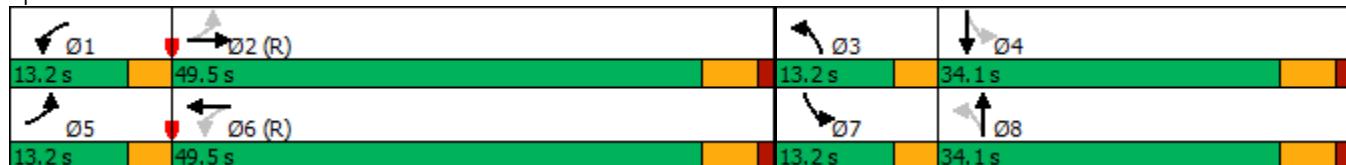

ICU Level of Service D

Analysis Period (min) 15

# 95th percentile volume exceeds capacity, queue may be longer.

Queue shown is maximum after two cycles.

Splits and Phases: 1: Austin Boulevard & Roosevelt Road

#### Intersection Summary

Area Type: Other

Cycle Length: 115

Actuated Cycle Length: 115

Offset: 22.5 (20%), Referenced to phase 2:EBTL and 6:WBTL, Start of Green

Natural Cycle: 80

Control Type: Actuated-Coordinated

Maximum v/c Ratio: 0.84

Intersection Signal Delay: 40.9

Intersection LOS: D

Intersection Capacity Utilization 83.3%

ICU Level of Service E

Analysis Period (min) 15

# 95th percentile volume exceeds capacity, queue may be longer.

Queue shown is maximum after two cycles.

Splits and Phases: 1: Austin Boulevard & Roosevelt Road

#### Intersection Summary

Area Type: Other

Cycle Length: 115

Actuated Cycle Length: 115

Offset: 22.5 (20%), Referenced to phase 2:EBTL and 6:WBTL, Start of Green

Natural Cycle: 90

Control Type: Actuated-Coordinated

Maximum v/c Ratio: 0.96

Intersection Signal Delay: 48.4

Intersection LOS: D

Intersection Capacity Utilization 87.2%

ICU Level of Service E

Analysis Period (min) 15

# 95th percentile volume exceeds capacity, queue may be longer.

Queue shown is maximum after two cycles.

Splits and Phases: 1: Austin Boulevard & Roosevelt Road

#### Intersection Summary

Area Type: Other

Cycle Length: 110

Actuated Cycle Length: 110

Offset: 22.5 (20%), Referenced to phase 2:EBTL and 6:WBTL, Start of Green

Natural Cycle: 80

Control Type: Actuated-Coordinated

Maximum v/c Ratio: 0.86

Intersection Signal Delay: 37.9

Intersection LOS: D

Intersection Capacity Utilization 78.0%

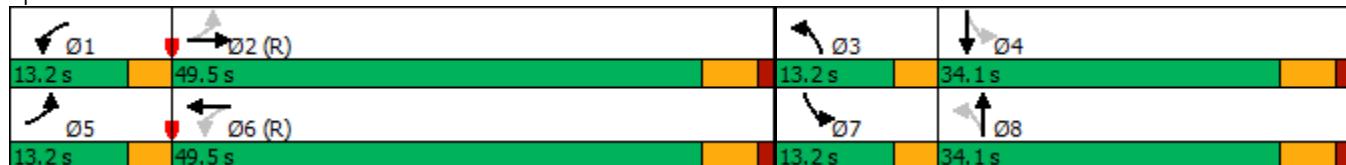

ICU Level of Service D

Analysis Period (min) 15

# 95th percentile volume exceeds capacity, queue may be longer.

Queue shown is maximum after two cycles.

Splits and Phases: 1: Austin Boulevard & Roosevelt Road

#### Intersection Summary

Area Type: Other

Cycle Length: 115

Actuated Cycle Length: 115

Offset: 22.5 (20%), Referenced to phase 2:EBTL and 6:WBTL, Start of Green

Natural Cycle: 90

Control Type: Actuated-Coordinated

Maximum v/c Ratio: 0.85

Intersection Signal Delay: 41.5

Intersection LOS: D

Intersection Capacity Utilization 84.3%

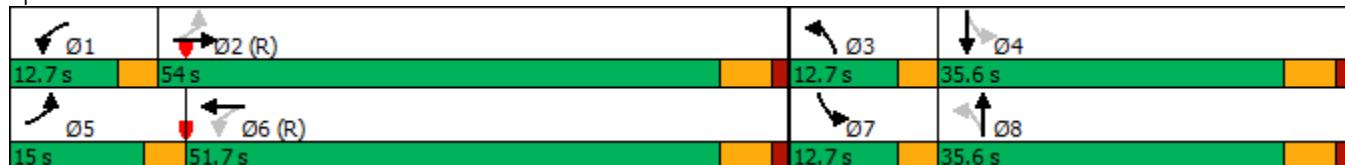

ICU Level of Service E

Analysis Period (min) 15

# 95th percentile volume exceeds capacity, queue may be longer.

Queue shown is maximum after two cycles.

Splits and Phases: 1: Austin Boulevard & Roosevelt Road
